

HIMALAYA

AN ENCHANTING &
BOLD SAUNA HEATER

finnleo
PURE SAUNA

Like it's mountainous namesake, the Himalaya rock tower heater, the first of its kind in North America, is spectacular, both in beauty and performance. With 210 pounds of rock and our BioWater Technique technology, **this sauna heater is changing the industry.**

HIMALAYA SAUNA HEATER

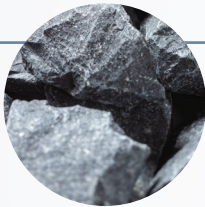

This floor standing rock tower heater fills your sauna with unique, pleasant heat.

Its large rock mass combined with an integrated water tank is unlike any other sauna heater. The Himalaya elevates the beauty of every sauna with its stunning design. Standing tall and proud, this heater can be installed nearly anywhere within a sauna – in corners, through benches, and even in the middle of the room.

VULCANITE SAUNA STONES

Vulcanite is the ideal sauna stone because of its hardness, heat retention, and expansive surface area (due to its jagged and sharp exterior). Plus, they shine elegantly when wet!

Holding 210 pounds of Vulcanite, the Himalaya produces enveloping heat and steam felt throughout the sauna. The tower design creates an even, slow release of heat and steam for a more enjoyable heat bath.

Amp/Voltage/Phase	28.3/240/1	37.5/240/1
Amp/Voltage/Phase	18.9/208/3	25.0/208/3
Shipping Weight	16	16

SAUNALOGIC2 CONTROL

The Himalaya heater, driven by the SaunaLogic2 control, can be activated from anywhere. Worldwide mobile functionality lets you take your control with you and set your sauna up to be ready when you are. The intuitive glass touch screen display lets you control timing, temperature, lighting, and system status.

Bluetooth functionality is also built-in to support an optional audio kit. Within the mobile app you can set up preferences by user, manage calendar programming, and control all sauna features (temperature, lighting, duration).

BIOWATER TECHNIQUE TECHNOLOGY

Open up your sauna's heat possibilities. The Himalaya features our unique BioWater Technique technology enabling it to produce two different types of heat. Through the optional use of an integral water tank, you can change your heat type based on how you are feeling each time you sauna.

Flexi-Sauna: 140–175° F

Taking advantage of the BioWater Technique, you'll fill the water container and set your temperature between 140 and 175 degrees Fahrenheit. This will generate more humidity at a lower temperature, providing a gentle sauna experience. Bio-aroma, via the use of essential oils, is an added benefit to further enhance your sauna session.

Hot & Dry Sauna: 175–190° F

When the tank is left empty, a more traditional and intense sauna sensation is created; a higher temperature, between 175 and 190 degrees Fahrenheit, with low humidity creates the dry heat many know and prefer.

The Himalaya heater comes standard in the Centurion Designer sauna, pairing perfectly with the unique black Taika wood paneling on the walls.

Any custom Finnleo sauna can be designed to include the Himalaya rock tower heater. It's unrivaled performance and striking appearance are well worth the investment for many sauna owners.
